NRS99.204

City of Chattanooga

Wastewater Treatment Plant Improvements

NRS99.204 was issued to authorize encapsulating 200 feet of stream to allow wastewater treatment plant improvements. E-mails in file from consultants show indecision on initiation of this project. It is unknown whether the encapsulation was initiated and completed. Further, mitigation included improvements to five streams throughout the city. No monitoring reports were submitted. Locations of stream improvements are at this point difficult to identify, and all appear to be in residential areas. If improvement locations could be identified, it would be difficult to attribute improvements or damage to the streams to the City of Chattanooga. Therefore, the division will close this file.
